2§.

Detta av Konungens Befallningshavande för förrättningsmannen utfärdade förordnandet upplästes och hade följande lydelse(Bilaga Litt A).

3§.

På därom framställd fråga förekom ingen jäfsanmärkning mot skiftesgodmannen Alfr. Svensson, vilken blivit tillkallad såsom ersättare för aflidne skiftesgodmannen A. Andren, ej heller visste han med sig stå i något jäfsförhållande till någon av delägarne.

4§.

Något laga hinder för förrättningens handläggning ansågo synemännen ej föreligga.

5§.

K. M. Andersson i Milsmaden och Klas Ström i Härlunda Selagård begärde att i protokollet få anteckmat deras fordran på ersättning för tillskyndad skada under dikningsarbetenas utförande.

6§.

Den nya jordvärderingslängden och kostnadsfördelningslängden förelades delägarne.

7§.

På flera delägares anhållan beslöts att förenämnda längder redan nu skulle vara tillgängliga några dagar hos Häradshövding Kronlund, som åtog sig att tillvarataga dem.

8§.

Räkningen över förrättningskostnaderna delgavs sökanden.

9§.

Synemännen vidhöll det vid syneförrättningen år 1902 avgivna utlåtander med de ändringar däri, som den gjorda omvärderingen föranlett i kostnadernas fördelning.

10§.

Då intet vidare förekom förklarade förrättningsmannen att sakägare som är missnöjd med beslut, eller åtgärd under syneförrättningen ingive han sina till Västerbygdens vattendomstol ställda besvär inom sextio dagar från denna dag med iakttagande av de bestämmelser som innefattas i nu gällande dikningslags 11 Kap. 85§.

11§.

Då intet vidare förekom, upplästes dagens protokoll och sammanträdet upplöstes.

Blivande värdet och samtidigt båtnaden härför har uppskattats till 100 kr. pr ha eller tillsammans c:a 118000 kronor (år 1921). Återstående 2485 ha åsattes samtidigt ett värde efter torrläggningen av 803730 kr., eller i medeltal omkring 320

kr pr ha. Blivande värdet för åkern är i allmänhet 750 kr. pr ha. Jordmånen utgöres i allmänhet av väl förmultnad torvjord av ovanligt god beskaffenhet, och de åsatta ingångs- och förbättringsvärdena måste enligt mitt förmenande betecknas som relativt låga.

Kostnaden. Kostnaderna för själva arbetets utförande beräknades år 1902 till 332343 kr. och gick i verkligheten till c:a 450000 kr. Tar man hänsyn till penningvärdets fall och en del andra ogynnsamma omständigheter, kan några större anmärkningar ej riktas mot kostnadsberäkningen som sådan, och hade utgifterna för företaget stannat vid denna summa, skulle företaget kunnat betecknas som mycket lönsamt. Vad som gjort, att företaget kommit att framstå som ett av de mest olyckliga torrläggningsföretagen i landet, är de mycket avsevärda kostnaderna för dels räntor å upplånade medel och dels skadeersättningar och rättegångskostnader, utgifter som i allt väsentligt måste betecknas som onödiga, om företaget skötts på ett tekniskt, ekonomiskt och juridiskt tillfredsställande sätt.

Tyvärr måste man lägga huvudparten av skulden på förrättningsmannen, som genom en ren felräkning och bristande insikt i sjöregleringsfrågor kom att begå den formella felaktigheten att ej kalla vattenverksägarna till förrättningen och därmed skapade förutsättningarna dels för de långvariga och dyrbara processer, som påbörjades 1907 och varade till år 1933, dels ock för det skadestånd på 633800 kr. till vattenverksägarna i Flian, som samtidigt på överenskommelsebasis fastställdes av vattendomstolen. Man kan också säga att ränteförlusterna är att hänföra till samma orsak på så sätt, att processerna icke blott fördyrade företaget och därmed ökade upplåningen utan även i hög grad hindrade sänkningens utnyttjanden, då ingen tordes lägga ned större kostnader på de detaljdikningar, som erfordrades utöver själva sjösänkningen för markernas fullgoda torrläggning.

Uraktlåtenheten att ej kalla vattenverksägarna till förrättningen motiverar förrättningsmannen i utlåtandet med att magasineringsförmågan i sjön mellan hög- och lågvatten skulle genom sänkningen ökas från 26,800,000 m^3 till 30,000,000 m^3. Dessa siffror ha

uppenbarligen tillkommit genom direkt felräkning. En sådan felräkning kan vem som helst göra, men en i sjöregleringar insatt person måste ovillkorligen av resultatet misstänka ett fel. Dessutom nöjer sig ej en sådan med att undersöka magasineringsförmågan mellan hög- och lågvatten utan ägnar huvudintresset åt den magasinering, som för vattenverksägarna är av största betydelsen, nämligen den som ryms mellan medel- och lågvatten samt mellan de oftast förekommande mindre högvattenstånden och medelvatten. Hade förrättningsmannen varit tillräckligt insatt i dessa förhållanden torde icke blott uraktlåtenheten att kalla ha varit utesluten, utan avloppet från sjön hade då utan större kostnadsökning kunnat ges en utformning, som utan skada för strandägarna gett vattenverksägarna samma magasinering efter företaget som före. Därmed hade kostnaderna kunnat hållas nere vid eller i närheten av de 470,000 kr., som förrättnings- och arbetskostnader m.m. nu i verkligheten drogo, och företaget hade varit ett ekonomiskt mycket gott företag.

För fullständighetens skull bör även framhållas, att räntekostnaderna torde ha kunnat avsevärt nedbringas, om företagets styrelse passat på att under högkonjunkturen under och efter första världskriget, då lantbrukarna i gemen hade gott om pengar, debitera ut då kända kostnader, som ej täcktes av beviljat odlingslån. Styrelsen påstår sig av förrättningsmannen ha bibringats den uppfattningen, att någon utdebitering ej kunde mot vederbörandes bestridande genomföras, innan den av synemännen föreskrivna efter-uppskattningen färdigställts, vilket skedde år 1921 eller just i skarven mellan hög- och lågkonjunktur. Hur härmed förhåller sig har ej kunnat utrönas, men att uppfattningen är felaktig är uppenbart.

Vad slutligen de efter 1933 års förlikningsdom upptagna kanalerna genom sjön beträffar, så ha de i hög grad förbättrat lågvattenframrinningen för vattenverken i Flian, vilket sammanhänger med den oerhörda avdunstning, som vid tillräcklig vattentillgång äger rum från de vassar, som sommartid täcka större delen av sjö-

ytan. Vederhäftigt folk, som kände till förhållandena före sänkningen, anser att avrinningen under långvariga torkperioder nu är större än före företagets utförande, trots att magasineringsförmågan är mindre, och detta håller jag för icke osannolikt. Tyvärr går Meteorologisk-Hydrografiska anstaltens observationer här ej tillbaka längre än till 1913, då huvudavloppet redan torde ha varit i huvudsak färdigställt, varför en säker på siffermaterial grundad bedömning härav icke är möjlig.

angående delaktigheten i Hornborgasjöns sänkningsföretag för Härlingstorp med underlydande och avstyckade fastigheter.

I samband med försäljning av Tranum och delar av Röde Mosse verkställdes på sin tid en uppdelning av det ursprungliga andelstalet i proportion till den i efteruppskattningslängden angivna jordförbättringen för resp. delfastigheter. Härefter återstod å Härlingstorp med underlydande fastigheter ett andelstal av 4,85986 procent, efter vilket utdebitering under senare år verkställts. I detta andelstal ingå andelarna för nedan angivna, från Härlingstorp avstyckade och försålda lägenheter, som alltså erlagts av ägaren till Härlingstorp med underlydande fastigheter. På begäran av nuvarande ägaren har utredning verkställts beträffande det andelstal, som enligt ovan angivna grunder bör åvila dels Härlingstorp med underlydande och dels de avstyckade och försålda fastigheterna. Utredningen har givit följande resultat:

Fastighet		Areal	Förbättringsvärde per fig.	Andelstal %
